

PRODUCT FEATURES

Manutec Dolomite Lime is a finely ground limestone that reduces soil acidity and acts as a soil conditioner.

By reducing the acidity of soil (raising the soil pH to neutral) of very acidic soils, plants have better access to essential nutrients required for vigorous and healthy growth.

Dolomite Lime used on heavy clay soils will improve drainage and soil aeration. Supplies both Calcium and Magnesium.

NOTE: Do not apply near acid loving plants. (e.g. azaleas, camellias, rhododendrons and gardenias).

ANALYSIS

ANALYSIS	%W/W
Calcium (Ca) as carbonate	16.00
Magnesium (Mg) as carbonate	8.70
Neutralising Value	78.00
Fine Material	80.00
Coarse Material	20.00

Available in:

8kg bags - 2 per carton

Code: MBP8280

Barcode: 9312462080447

DIRECTIONS FOR USE

TO RAISE SOIL pH

Prior to applications, determine the pH of your soil using the Manutec Soil pH Test Kit. The amount of lime to use depends on the amount of change in pH needed and the soil texture.

Use the following as a guide:

To raise the pH of the top 10cm of soil by one unit, eg. pH 5.5 to pH 6.5, add the recommended number of grams to each square meter-

SANDY SOIL 100 grams

LOAM SOIL 200 grams

CLAY SOIL 300 grams

Spread evenly over the top soil and dig in, to mix well. Water thoroughly. The full effect of each application may take up to two months. After this time the soil pH should be re-tested. Repeat application if the desired pH is not achieved. Thereafter check pH each season and adjust with Dolomite as required.
