

### PRODUCT FEATURES

When soils are very acidic or very alkaline, plants will not be able to absorb all the nutrients they need, even though plenty are available in the soil. Plants will not respond no matter how much fertiliser you add.

Test your soil or potting mix regularly to ensure they have neutral pH, between 6 and 7.

Use Manutec Soil pH Test Kit, which is simple, accurate, economical and provides you with instant results.

When used as directed, the contents will do in excess of 100 soil tests.

### PRODUCT COMPONENTS

- Indicator Solution
- White Barium Sulphate Powder
- Colour Chart
- Mixing Plate
- Mixing Rod
- Instruction Sheet

### DIRECTIONS FOR USE

- Place a small soil sample or potting mix on the test plate.
- Add indicator liquid until the sample can be stirred into a thick paste.
- Dust the paste with the white powder provided.
- The white powder instantly changes colour and take reading within a minute. Read from the colour card the pH value of the colour nearest to that of the sample.
